

TactiPad™

TactiPad Drawing Board

The TactiPad is a versatile drawing board which enables a VIP (Visually Impaired Person) to make a tactile drawing themselves or on which someone can make a drawing for the VIP. These drawings are made on a thin sheet of plastic foil on top of a layer of rubber. By firmly pressing down on the foil the lines will raise instantly, forming the tactile image. The ergonomic design makes drawing easier and much more enjoyable.

The TactiPad has many applications: it is the ideal drawing board for leisure activities, schoolwork or in your professional career. It can even be used on the go or while travelling.

You can choose whether you want to make a simple sketch by hand, or use the different drawing tools – ruler, triangle, protractor and compasses – for highly accurate drawings. Eight adjustable buttons and measurement indicators around the drawing surface allow you to accurately fix the tools while drawing.

A selection of the possibilities

- Means of communication between VIPs and sighted people.
- Everyday drawings for fun and games.
- Keeping track of the scores in a game.
- Mounted on the wall as a memo board.
- Doing your homework (e.g. maths or geography).
- Making greeting cards or other creative expressions.
- Creating pie charts and other diagrams.
- Using or creating a map of your surroundings by carrying it with the shoulder strap.

Available accessories for TactiPad

GraphGrid und CircleFrame for additional functionality

Besides the regular drawing tools, two additional accessories and their accompanying drawing tools have been developed to extend the drawing possibilities on the TactiPad even more.

The GraphGrid is the tactile equivalent of grid paper and uses rubber bands to add a grid to the drawing surface. This can be used, for example, to create tables, for drawings with repetitive patterns or for graphs and other mathematical drawings.

The CircleFrame can be used for great accuracy in circular drawings. Using the drawing tools, you can easily create images such as pie charts, the face of a clock or interesting circular patterns and motifs.

GraphGrid: item-No. HW-76810

CircleFrame: item-No. HW-76820

Included in delivery TactiPad

The TactiPad Drawing Board includes following drawing tools: ruler, triangle, protractor and compass. Included is also the carrying bag and 50 sheets of drawing foil. The GraphGrid, Circle Frame and additional drawing foils are available accessories.
